

Furthering education sector's computerisation project discussed

Furtherance of the project on creating an integrated computer system for the education sector in Tunisia was the focus of the meeting held, on Friday, Nov. 19, 2010, between Education Minister Hatem Ben Salem and Romanian Information and Communication Technologies Company "SIVECO" deputy-chairman Florian Ciolacu.

Carrying out this project is part of materialising the June 2009 understanding memorandum between the two sides.

According to this memorandum, "SIVECO" company is to assist the education ministry in devising a comprehensive conception of a national programme aimed to develop integration of information and communication technologies as an educational support, through the achievement of two pilot projects in some educational establishments, in the digital educational contents creation field.

Mr. Ben Salem pointed out that this project would contribute to speed up implementation of the education digitisation strategy, highlighting the importance of training teachers who are the pillars of the educational operation.

For his part, Mr. Florian Ciolacu voiced satisfaction at Tunisia's confidence in Romanian experience in systems and programming systems through its partnership with SIVECO company, one of the largest Romanian and European enterprises specialised in this field.

He praised Tunisia's efforts in developing human resources in the fields of intelligence and knowledge, adding that the security and stability distinguishing Tunisia contribute to incite to investment and exchange of expertise and experiences.
